Final Project Report

Items:

1. **Complete: 50%** — Personalised web pages for employees/guests + registered users were created but not personal for each customer.
2. **Complete: 70%** — We were able to have the users choose a pre-built combination of parts for a student pc, gamer pc, and business pc but we were not able to have the customer customise the presets and have the hardware constraint for each of the products.
3. **Complete: 95%** — We allowed visitors to freely browse and comment on items. Guest users could also sign up, and their application was reviewed by an employee. However we haven't made it possible for employees to send a memo in case of a rejected application.
4. **Complete: 100%** — We achieved everything here. Customers have the ability to deposit money and make purchases. Their purchase is denied and they receive a warning if they try to make a purchase without enough balance.
5. **Complete: 40%** — A page to build a custom pc exists but compatibility is not checked and no choice is given if the custom pc can be used by the store.
6. **Complete: 0%** — Ratings are available as a preset. No rating system.
7. **Complete 33%** — A customer who has 3 warnings that have gotten from the customer support box in the bottom right will be kicked and they are then directed to see employees. But employees do not get demoted or fired and there is no compliment system.

8. **Complete: 0%** — No rating system
9. **Complete 98%** — Our customer support box on the bottom right has a full working taboo list filter with visitors not being able to send a bad word at all (message deleted) + registered users being able to send bad words but will get replaced with ***s and warnings are issued. If >3 warnings are issued, the customer is kicked. This is the same for the comments in each product page excluding the kicking. You can also only comment if logged in.
10. **Complete 90%** — Our creative feature was a sidebar product filter(Category/Brand) and sort(Price) feature for whenever the user is browsing the products at the “Products” page and “Build a PC” page but we were not able to have the sorting for the ratings to work due to not having the ratings in our database.

Grade Members Evaluation:

Melchizedek De Castro, Verald, Sebastian Harvey, Rezwan Ahmed, Alhamza

During the website demo, we were asked if we all deserve the same grade to which we answered yes. A grade that everyone agreed on was an 83.
